

Machine Test Questions - Node.js

Overview

Thank you for participating in our Node.js development machine test. Please read the following instructions carefully before starting the test to ensure you meet the required guidelines and expectations.

Test Guidelines

- Kindly go through the questions and related instructions before starting the machine test.
- Complete the given task within 2 hours.
- The expected outcome is a stable project that runs smoothly without crashes or significant issues.

Submission Guidelines

- After completion, please share the source code file via email to renu@ibosoninnov.com for evaluation.
- Ensure your submission includes:
 - ◆ Complete source code in a structured format.
 - ◆ Mention any dependencies or additional resources required.

Development Guidelines

- ❖ You may use the internet as a resource during the test. However:
 - Avoid directly copying or modifying existing project codes.
 - No AI tools or AI-generated code suggestions are acceptable.
 - Your submission should be original to qualify for evaluation.

Test Environment

- This is a supervised test. You are required to:
 - Share the screen throughout the test duration.
 - Keep the video on during the entire test.
- The screen-sharing session will be recorded for evaluation purposes.

Best of luck!

Technical Requirements

Question:

E-commerce API Development: Create a complete REST API system for an e-commerce website.

Database Requirements: Design and implement three tables with appropriate fields and relationships:

- Users table to store user information
- Product table to store product details
- Purchases table to record transaction data

Module Requirements: Create separate modules for:

- User Management
- Product Management
- Purchase Management

API Development: Implement CRUD operations for:

- Users
- Products
- Purchases

Follow standard REST API conventions and best practices

Evaluation Criteria

- Code organization and structure
- Implementation of all required features
- Database design and relationships
- API design and standards
- Code quality and best practices
